Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1,2,3,4,8,12,16,20,30-33,37,41,45,49 are rejected under 35 U.S.C. 102(e) as being anticipated by Roberts et al (6134459).

Figure 2a shows the primary device housing 32. Figure 7 shows light emitters 92,94 and a light detector 195. Figure 8 shows electrodes 5, 7 that can sense and stimulate tissue. Column 12, lines 1-6 teach that pressure sensors can be used as the sensor assembly 17.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 5,9,13,17,21-27,34,38,42,46,50-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al in view of Fitch et al (6575965).

Page 2

Application/Control Number: 10/077,972

Art Unit: 3762

Fitch teaches a mirror 173 that can be used to reflect laser light from a proximal end of a lead in order to determine various characteristics of the tissue, such as pressure, see figure 18. It would have been obvious to use such a mirror with the device of Roberts since such has been shown to be effective in sensing pressure of internal tissue regions. Further, the use of laser light is also obvious to use, as shown by Fitch, since it is commonly used in fiber-optic devices for its reliability and efficiency.

Page 3

5. Claims 6,10,14,18,35,39,43,47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al in view of Takaki (6283632).

Takaki teaches measuring temperature changes by measuring the change in the refractive index of cladding; see col. 1, lines 65+. It would have been obvious to use such a measuring means with the device of Roberts since such has been proven effective in use with fiber-optic systems.

6. Claims 7,11,15,19,36,40,44,48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al in view of Weiss (5132529).

Weiss teaches the use of an optical strain gauge. It would have been obvious to use such with the device of Roberts since such has been shown to be very accurate in measuring various characteristics.

Art Unit: 3762

7. Claims 28,5% are rejected under 35 U.S.C. 103(a) as being unpatentable over Roberts et al in view of Hedberg et al (6078835).

Hedberg teaches the use of hydrostatic pressure sensing components. It would have been obvious to use such with the device of Roberts since such has been shown to be effective in sensing pressure from within the human body.

Allowable Subject Matter

8. Claims 29,58 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott M. Getzow whose telephone number is (703) 308-2997. The examiner can normally be reached on M-F, 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on (703) 308-5181. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
